The Certified Scrum Product Owner Training is a 2-day workshop that introduces the concepts of agility using the Scrum approach. After completing the course, participants will become Certified Scrum Product Owners (CSPO). Scrum Product Owners are responsible for building systems, creating new product releases, or any other complex business project in an agile operating model.

Scrum is an iterative and incremental framework for developing and maintaining complex products according to Agile principles. At Scrum, the development team delivers high-quality, productive functionality at the end of each Sprint, creating the agility needed to meet rapidly changing requirements.

The Scrum think tank challenges its users to focus on continuous improvement, and its sprints create the persistence needed to deliver results in an environment where needs are constantly changing.

These features have led to Scrum becoming the world's most popular reference framework for agile software production - and its use is constantly being expanded to new areas.

Take a look at the CSPO training!

Target audience: The course is suitable for individuals who are product owners, business owners, business developers, clients (development commissioners), or eg product managers - and want to expand their skills at Scrum.

The results of the training: After your Certified Scrum Product Owner training, you will be familiar with the Scrum Framework so you can control how it is used in practice. This course will introduce you to Scrum and Agile thinking and practice so you can start working as a Scrum product owner.
